

How Connected Are You?

The federal workforce increasingly depends on fast, uninterrupted access to work materials and information – so how effectively are organizations accommodating these needs? To answer this question, Government Business Council polled a random sample of 148 federal employees in March 2018.

Many agencies still have trouble going wireless...

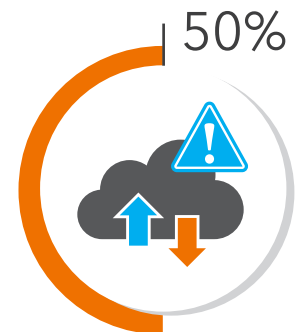

...which constrains the effectiveness of their workforce.

Federal respondents rate their organization's wireless/WiFi capabilities to be poor or very poor with regard to enabling mobility.

Feel that wireless access in their organization is worse or significantly worse than their wireless experience outside of their job.

Nearly half of respondents agree or strongly agree that lack of mobility/wireless access hinders their productivity.

The federal workforce has spoken.

Mobility is the future – and to fulfill this vision, agencies need to prioritize robust connectivity anywhere and anytime.
